Product Specifications

COMMERCIAL SPLIT SYSTEMS CONDENSING UNITS R-410A, 6 to 12.5 TONS

BUILT TO LAST, EASY TO INSTALL AND SERVICE

- · Single stage cooling capacity control on all models with Micro-channel (MCHX) technology condenser coils
- · Brass suction and liquid line service valves
- Full perimeter base rail with built-in rigging adapters and fork truck slots
- Pre-painted exterior panels and primer-coated interior panels tested to 500 hours salt spray protection
- · Fully insulated cabinet
- Fully hermetic scroll compressor with crankcase heater
- Compressor mounted on independent vibration isolators
- Comfort AlertTM Diagnostic Board LED Go-No-Go and fault code Built in time guard anti-short cycle Phase protection Fault code retention logic Low volt compressor contactor protector

- · Direct drive permanently lubricated condenser fan motors
- · Newly designed terminal board facilitates simple safety circuit troubleshooting and simplified control box arrangement
- Outdoor temperature cooling operation range up to 125°F (52°C) and down to 35°F (2°C)
- · All units factory run tested

WARRANTY

- 5 Year compressor limited warranty
- 1 Year parts limited warranty

| Non-powered Convenience Outlet (115-v) | X | |
| Low Ambient temperature head pressure controller | X | X |
| Louvered Hail Guard | | X |
| Wired Condenser Coil Grille | | X |

CAS factory-installed options

E-coated aluminum-fin coils have a flexible and durable epoxy coating uniformly applied to all coil surfaces. E-coating provides superior protection with unmatched flexibility, edge coverage, metal adhesion, thermal performance, and most importantly, corrosion resistance.

E-coated coils provide this protection since all coil surfaces are completely encapsulated from environmental contamination. This coating is especially suitable in industrial environments.

-20°F low-ambient temperature kit option (Motormaster®) controls outdoor-fan motor operation to maintain the correct head pressure at low outdoor ambient temperatures.

115-v non-powered convenience outlet is used to power electric drills, lights, and refrigerant recovery machines.

Non-fused disconnect switch is used to remove power locally at the condensing unit. This switch also includes a power lockout capability to protect the service person.

CAS field-installed accessories

-20°F low-ambient temperature kit accessory (MotorMaster I) controls outdoor-fan motor operation to maintain the correct head pressure at low outdoor ambient temperatures.

Louvered hail guard package protects coils against damage from flying debris and hail.

Condenser coil grille package protects condensing unit coil from impact by large objects and vandalism.

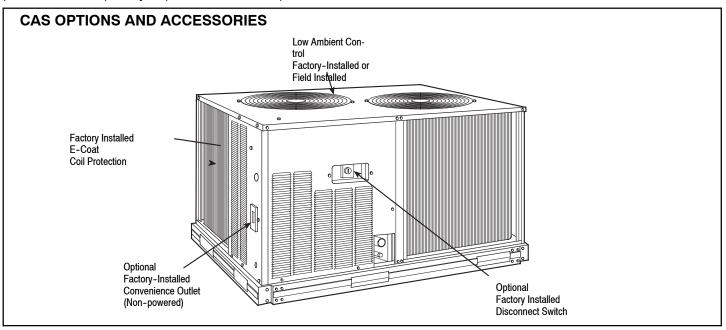

Table 2 – FAS (Fan Coil) FACTORY INSTALLED OPTIONS AND FIELD INSTALLED ACCESSORIES

| ITEM | FACTORY INSTALLED OPTION | FIELD INSTALLED ACCESSORY |

| Steam Heating Coil | | X |
| Subbase | | X |

FAS factory-installed options

Alternate fan motors and drives are available to provide the widest possible range of performance.

Units constructed of prepainted steel are available from the factory for applications that require painted units. Unit color is American Sterling Gray.

FAS field-installed accessories

Two-row hot water coils have $^{5}/_{8}$ -in. diameter copper tubes mechanically bonded to aluminum plate fins. Coils have non-ferrous headers.

One-row steam coil has 1-in. OD copper tube and aluminum fins. The Inner Distributing Tube (IDT) design provides uniform temperatures across the coil face. The IDT steam coils are especially suited to applications where sub-freezing air enters the unit.

Electric resistance heat coils have an open-wire design and are mounted in a rigid frame. Safety cutouts for high temperature conditions are standard.

Economizer (enthalpy controlled) provides ventilation air and provides "free" cooling if the outside ambient temperature and humidity are suitable. The economizer can also be used in conjunction with ${\rm CO_2}$ sensors to help meet indoor air quality requirements.

Discharge plenum directs the air discharge into the occupied space; integral horizontal and vertical louvers enable redirection of airflow.

Return-air grille provides a protective barrier over the return-air opening and gives a finished appearance to units installed in the occupied space.

Subbase provides a stable, raised platform and room for condensate drain connection for floor-mounted units.

Overhead suspension package includes necessary brackets to support units in horizontal ceiling installations.

 ${
m CO_2}$ sensors can be used in conjunction with the economizer accessory to help meet indoor air quality requirements. The sensor signals the economizer to open when the ${
m CO_2}$ level in the space exceeds the setpoint.

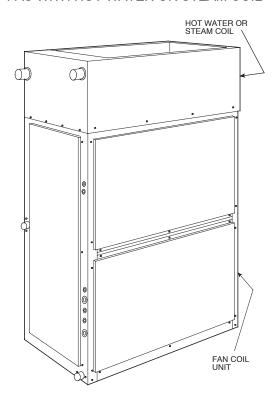

Condensate drain trap includes an overflow shutoff switch that can be wired to turn off the unit if the trap becomes plugged. The kit also includes a wire harness that can be connected to an alarm if desired. The transparent trap is designed for easy service and maintenance.

SELECTION PROCEDURE

Combination ratings for CAS units matched with FAS Series air handlers are in this book.

I. Determine cooling load, evaporator-air temperature, and quantity.

Given:

| Total Cooling Capacity Required (TC) |
|--|
| Sensible Heat Capacity Required (SHC) |
| Compressor Type Scroll |
| Temperature Air Entering Condenser (Edb) |
| Temperature Air Entering Evaporator (db/wb) 80°F db, 67°F wb |
| Evaporator Air Quantity 4,000 cfm |
| External Static Pressure 0.4 in. wg |
| Length of Interconnecting Refrigerant Piping |
| Power Supply (V-Ph-Hz) 208/230-3-60 |
| |

II. Select condensing unit air-handler combination.

For this example, select a CAS121 matched with a FAS120 coil. This CAS121/FAS120 condensing unit air-handler combination provides 122,000 Btuh of total cooling capacity and 97,200 Btuh of sensible capacity at the given conditions. If other temperatures or airflow values are required, interpolate the values from the combination ratings.

III. Determine sizes of liquid and suction lines.

Enter Refrigerant Piping Sizes table. The sizes shown are based on an equivalent length of pipe. This equivalent length is equal to the linear length of pipe indicated at the top of each sizing column, plus a 50% allowance for fitting losses. (For a more accurate determination of actual equivalent length in place of using the estimated 50% value, refer to Carrier System Design Manual.) For this example, note in the linear length column that the proper pipe size is $^1/_2$ in. for the liquid line and $1^3/_8$ in. for the suction line.

IV. Determine fan rpm and bhp (brake horsepower).

Refer to the FAS Air Handler Catalog - Fan Performance table. Enter the Air Handler Fan Performance table at FAS120 at 4000 cfm and move to the External Static Pressure (ESP) column. Note that the conditions require 803 rpm at 1.77 bhp.

V. Determine motor and drive.

Enter the Fan Motor Data tables and find the standard motor for FAS120 unit rated at 2.4 Hp. Since the bhp required is 1.77, a standard motor satisfies the requirement and should be used.

Next, find the type of drive that satisfies the 803 rpm requirement in the Drive Data tables. For the FAS120 unit, the Standard Drive table shows an rpm range of 666-863. Since the rpm required is 803, the standard drive satisfies the requirement and should be used.

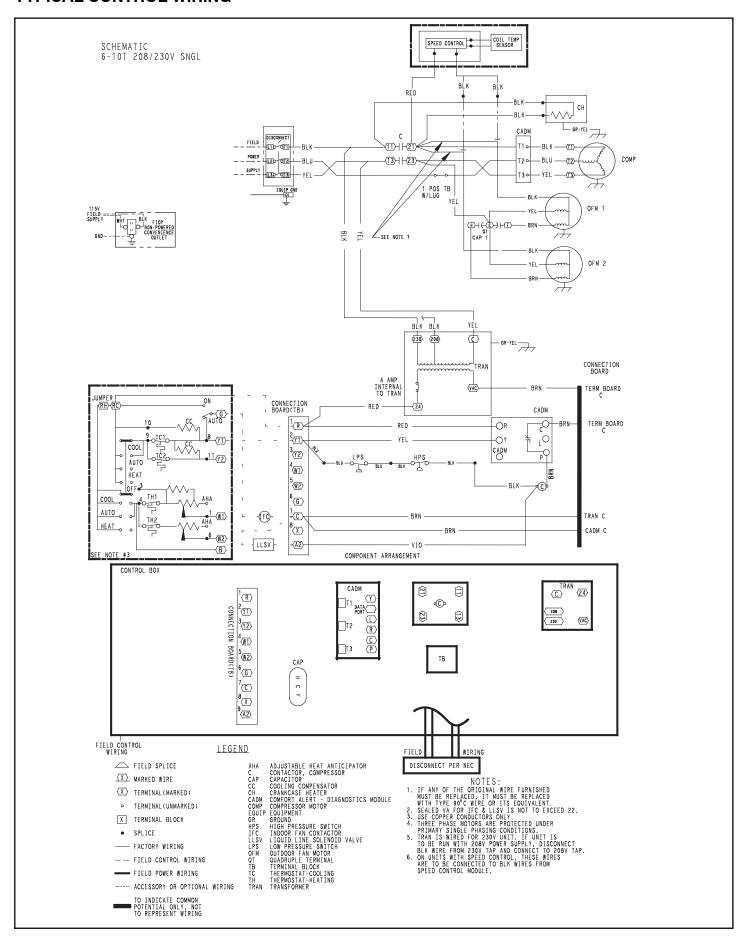

CONTROLS

Operating sequences

CAS072-151

At start-up, the thermostat calls for cooling. With all safety devices satisfied, the compressor contactor and fan contactor energize, causing the compressor outdoor-fan motor to operate. Thermostat contacts energize, allowing the field-supplied and field-installed indoor-fan contactor to function. A field-supplied and field-installed liquid line valve also opens, allowing the system to function in Cooling mode. As cooling demand is satisfied, the thermostat contacts break, deenergizing the contactor and causing the system to shut off. The liquid line solenoid valve closes, minimizing the potential for refrigerant migration. The compressor does not restart until the thermostat again calls for cooling. The system is protected with a safety circuit so that the system will not start if a fault exists (i.e., high or low pressure fault). To reset the safety circuit, set the thermostat to eliminate the cooling demand, then return it to the original setpoint. This should be done only once, and if the system shuts down due to the same fault, determine the problem before attempting to restart the system.

APPLICATION DATA

Operating limits

| Maximum outdoor temperature 125 F |
|---|
| Minimum return-air temperature (FAS) \hdots .55 F |
| Maximum return-air temperature (FAS) 95 F |
| Range of acceptable saturation suction temperature |
| Maximum discharge temperature 275 F |
| Minimum discharge superheat 60 F |
| NOTES: |

NOTES:

- Select air handler at no less than 300 cfm/ton (nominal condensing unit capacity).
- 2. Total combined draw of the field-supplied liquid line solenoid valve and air handler fan contactor must not exceed 22 va. If the specified va must be exceeded, use a remote relay to control the load.

Liquid line

For applications with liquid lift greater than 20 ft, use $^{1}/_{2}$ -in. liquid line where $^{3}/_{8}$ in. is shown; use $^{5}/_{8}$ -in. liquid line where $^{1}/_{2}$ in. is shown. The maximum liquid lift is 60 ft.

MINIMUM OUTDOOR-AIR OPERATING TEMPERATURE

| | MINIMUM OUTDOOR TEMP (F) | | | | | |
|--------|--------------------------|-------------------------------|--|--|--|--|
| UNIT | Std | With Motormaster® Control† | | | | |
| CAS072 | 35 | | | | | |
| CAS091 | 35 | -20 | | | | |
| CAS121 | 35 | -20 | | | | |
| CAS151 | 35 | | | | | |

[†] Wind baffles (field-supplied and field-installed) are recommended for all units with Motormaster control. Refer to Low Ambient Temperature Control Installation Instructions for additional information.

Refrigerant piping

IMPORTANT: Do not bury refrigerant piping underground.

It is recommended that the refrigerant piping for all commercial split systems include a liquid line solenoid valve, a liquid line filter drier and a sight glass.

For refrigerant lines longer than 75 lineal ft, a liquid line solenoid valve installed at the **indoor** unit and a suction accumulator are required. Refer to the Refrigerant Specialties Part Numbers table.

REFRIGERANT PIPING SIZES

LEGEND

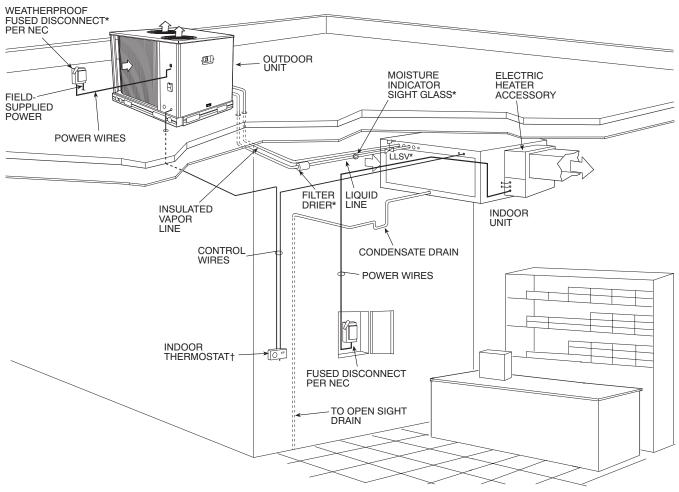

L — Liquid Line

S - Suction Line

NOTES:

- 1. Pipe sizes are based on a 2° F loss for liquid and suction lines.
- 2.Pipe sizes are based on the maximum linear length, shown for each column, plus a 50% allowance for fittings.
- Charge units with R-410A refrigerant in accordance with unit installation instructions.
- 4.See Accessory Page for list of Refrigerant Specialities Part Numbers

TYPICAL PIPING AND WIRING

LEGEND:

NEC - National Electrical Code

TXV - Thermostatic Expansion Valve

* Field-supplied

† Double riser may be required. Consult condensing unit product data catalog for details.

NOTES:

- 1.All piping must follow standard refrigerant piping techniques.
- 2.All wiring must comply with the applicable local and national codes.
- 3. Wiring and piping shown are general points-of-connection guides only and are not intended for, or to include all details for, a specific installation.
- 4.Liquid line solenoid valve (solenoid drop control) is recommended to prevent refrigerant migration to the compressor.
- 5.Internal factory-supplied TXVs not shown.

GUIDE SPECIFICATIONS

Commercial Air-Cooled Condensing Units

HVAC Guide Specifications

Size Range: 6 to 12.5 Tons, Nominal

Carrier Model Numbers: CAS072-151

Part 1 — General

1.01 SYSTEM DESCRIPTION

Outdoor-mounted, air-cooled condensing unit suitable for on-the-ground or rooftop installation. Unit shall consist of a hermetic scroll air-conditioning compressor assembly, an air-cooled coil, propeller-type condenser fans, and a control box. Unit shall discharge supply air upward as shown on contract drawings. Unit shall be used in a refrigeration circuit matched with a packaged air-handling unit.

1.02 QUALITY ASSURANCE

- A. Unit shall be rated in accordance with ARI Standard 360-2000.
- B. Unit construction shall comply with ANSI/ASHRAE 15 safety code latest revision and comply with NEC.
- C. Unit shall be constructed in accordance with UL 1995 standard and shall carry the UL and UL, Canada label.
- D. Unit cabinet shall be capable of withstanding 500-hour salt spray exposure per ASTM B117 (scribed specimen).
- E. Air-cooled condenser coils for hermetic compressor units (CAS) shall be leak tested at 150 psig, and pressure tested at 650 psig.
- F. Unit shall be manufactured in a facility registered to ISO 9001:2000 manufacturing quality standard.

1.03 DELIVERY, STORAGE, AND HANDLING

Unit shall be shipped as single package only, and shall be stored and handled according to unit manufacturer's recommendations.

1.04 WARRANTY (FOR INCLUSION BYSPECIFYING ENGINEER.)

Part 2 — Products

2.01 EQUIPMENT

A. General:

Factory-assembled, single piece, air-cooled condensing unit. Contained within the unit enclosure shall be all factory wiring, piping, controls, compressor, holding charge, and special features required prior to field start-up.

B. Unit Cabinet:

1. Unit cabinet shall be constructed of galvanized steel, bonderized and coated with a prepainted baked enamel finish.

2. A heavy-gauge roll-formed perimeter base rail with forklift slots and lifting holes shall be provided to facilitate rigging.

C. Fans:

- 1. Condenser fans shall be direct driven, propeller type, discharging air vertically upward.
- 2. Fan blades shall be balanced.
- 3. Condenser fan discharge openings shall be equipped with PVC-coated steel wire safety guards.
- 4. Condenser fan and motor shaft shall be corrosion resistant.

D. Compressor:

- 1. Compressor shall be of the hermetic scroll type .
- 2. Compressor shall be mounted on rubber grommets.
- 3. Compressors shall include overload protection.
- 4. Compressors shall be equipped with a crankcase heater.
- 5. Compressor shall be equipped with internal high discharge temperature protection (CAS072 and CAS121).

E. Condenser Coil:

- Condenser coil shall be air-cooled and circuited for integral subcooler.
- 2. Standard condenser coils shall have all aluminum micro-channel (MCHX) Heat Exchanger Technology design consisting of aluminum multi-port flat tube design and aluminum fin. Coils shall be a furnace brazed design and contain epoxy lined shrink wrap on all aluminum to copper connections. Condenser coils shall be leak tested to 150 psig, pressure tested to 650 psig, and qualified to UL 199 burst test at 1980 psig.

F. Refrigeration Components:

Refrigeration circuit components shall include liquid line service valve, suction line service valve, a full charge of compressor oil, and a partial holding charge of refrigerant.

G. Controls and Safeties:

- 1. Minimum control functions shall include:
 - a. Control wire terminal blocks.
 - b. Compressor lockout on auto-reset safety until reset from thermostat.
- 2. Minimum safety devices which are equipped with automatic reset (after resetting first at thermostat), shall include:
 - a. High discharge pressure cutout.
 - b. Low pressure cutout.

H. Operating Characteristics:

| 1. The capacity | of the conde | ensing un | nit shall me | eet or |
|-----------------|--------------|-----------|--------------|--------|
| exceed | Btuh at a | suction | temperatu | ire of |
| F. The | power cons | umption a | at full load | shall |
| not exceed | kW | | | |

- The combination of the condensing unit and the evaporator or fan coil unit shall have a total net cooling capacity of ______ Btuh or greater at conditions of _____ cfm entering-air temperature at the evaporator at _____ F wet bulb and _____ F dry bulb, and air entering the condensing unit at F.
- The system shall have an EER of _____ Btuh/Watt or greater at standard ARI conditions.
- I. Electrical Requirements:
 - Nominal unit electrical characteristics shall be _____ v, 3-ph, 60 Hz. The unit shall be capable of satisfactory operation within voltage limits of ____ v to _____ v.
 - 2. Unit electrical power shall be single-point connection.
 - Unit control circuit shall contain a 24-v transformer for unit control.
- J. Special Features:
 - 1. Low-Ambient Temperature Control:

A low-ambient temperature control shall be available as a factory-installed option or as a field-installed accessory. This low-ambient control shall regulate speed of the condenser-fan motors in response to the saturated condensing temperature of the unit. The control shall maintain correct condensing pressure at outdoor temperatures down to -20 F.

- 2. Optional Condenser Coil Materials:
 - a. Condenser Coil Protective Coating E-Coated micro-channel (MCHX) coil:

E-Coated aluminum micro-channel (MCHX) coils shall have a flexible epoxy polymer coating uniformly applied to all coil external surface areas without material bridging between fins or louvers. Coating process shall ensure complete coil encapsulation, including all exposed fin edges. E-Coat thickness of 0.8 to 1.2 mil with top coat having a uniform dry film thickness from 1.0 to 2.0 mil on all external coil surface areas, including fin edges, shall be provided. E-Coated coils shall have superior hardness characteristics of 2H per ASTM D3363-00 and cross-hatch adhesion of 4B-5B per ASTM D3359-02. E-coated products shall have superior impact resistance with no cracking, chipping or peeling per NSF/ANSI 51-2002 Method 10.2.

- Unit-Mounted, Non-Fused Disconnect Switch: Switch shall be factory-installed and internally mounted. NEC and UL-approved non-fused switch shall provide unit power shutoff. Switch shall be accessible from outside the unit and shall provide power off lockout capability.
- 4. Convenience Outlet:

Outlet shall be factory-installed and internally mounted with easily accessible 115-v female receptacle. Outlet shall include 15 amp GFI (ground fault interrupter) receptacle with independent fuse protection. Voltage required to operate convenience outlet shall be field supplied and separate from the unit power supply. Outlet shall be accessible from outside the unit.

- 5. Thermostat Controls (field supplied):
 - a. Programmable multi-stage thermostat shall have 7-day clock, holiday scheduling, large backlit display, remote sensor capability, and Title 24 compliance.
 - b. Commercial Electronic Thermostat shall have 7-day timeclock, auto-changeover, multi-stage capability, and large LCD (liquid crystal display) temperature display.
- Louvered hail Guard Package:
 Louvered hail guard package shall protect coils against damage from hail and other flying debris.
- 7. Condenser Coil Grille:

Grille shall add decorative appearance to unit and protect condenser coil from large objects and vandalism.
